# ACGME – Design/Purpose

- ▶ The Resident Case Log System is an internet database designed by ACGME utilizing CPT/ICD 9 codes to track resident experience
- ▶ All residents in ACGME accredited programs must enter their operative experience concurrently each year of residency

# New Interface - 2012

- The Resident Case Log System was updated with the new interface in 2012 and is available for use
- Some of notable new features include:
  - Cleaner Look/Functionality
  - Menu bar on left side for better multitasking
  - Create custom lists of codes for quick reference
  - Search for code based on defined category

# Log On

- Go to the ACGME homepage at
  - [www.acgme.org](http://www.acgme.org)
  - Resident Case Log System
  - Login

# Resident Case Log System

## Resident Case Log System

Access to the Resident Case Logs System is secured by an encryption certificate obtained through the Verisign Corporation. We use 128-bit SSL encryption to help ensure the secure transfer of information. If you are using a less secure encryption level you may experience difficulty and should upgrade.

The data you provide us will be used by ACGME for accreditation, will be maintained confidentially, and will not be distributed for commercial use.

Summary data and other information about resident physicians or resident physician education which is not identified as confidential will be published in a manner appropriate to further the quality of GME and to meet the needs of the public and the law.

ACGME

## Welcome to Resident Case Logs

The Accreditation Council for Graduate Medical Education (ACGME) is responsible for the accreditation of post-MD medical training programs. Accreditation is accomplished through a peer review process and is based upon established standards and guidelines.

Access to the Resident Case Logs System is secured by an encryption certificate obtained through the [Verisign Corporation](#). We use 128-bit SSL encryption to help ensure the secure transfer of information. If you are using a less secure encryption level you may experience difficulty and should upgrade.

The data you provide us will be used by ACGME for accreditation, will be maintained confidentially, and will not be distributed for commercial use.

Summary data and other information about programs, institutions, resident physicians or resident physician education which is not identifiable by person or organization may be published in a manner appropriate to further the quality of GME and consistent with ACGME policies and the law.

# Critical Care Index Guidelines

## Guidelines

The system will allow residents to identify the required minimum 25 surgical critical care index cases by using CPT Code 99292. Code 99292 will map to all seven of the surgical critical care conditions.

*It is important for new users entering CPT code 99292 to understand that this index category is different from the other codes. CPT code 99292 (and it alone) will allow credit to be taken for multiple procedures on the same patient on the same day. You still need to mark one of the codes for credit, but on the report they will be counted equally. After adding the second code, you will be prompted that the code is already in the selection list, simply click "Ok" to proceed.*

Reports will provide both a summary of all instances in which the resident managed two of the seven index critical care conditions and a detailed report for each patient encounter that will identify all the conditions that were managed by the resident for any one patient.

Do not submit 25 of the same conditions. The completed logs should include experience, with at least one patient in all seven of the categories.

### **RRC CODE ASSIGNMENT TO NEW SURGICAL CRITICAL CARE PROCEDURES**

To follow is a list of RRC procedure values that have been assigned to the newly developed Surgical Critical Care Patient Management Procedures.

**8410** - Ventilatory Management  
(>24 hrs on ventilator)

**8420** - Bleeding  
(non-trauma patient >3 units)
